Netweb Technologies Secures ₹1,734 Crore Strategic Order to Power India's Sovereign AI Infrastructure

Faridabad, India | 3 September 2025: Netweb Technologies India Limited (Netweb), a leading Indian origin, owned, and controlled Original Equipment Manufacturer (OEM) in the space of High-end Computing Solutions (HCS), has secured a landmark order worth ₹1,734 crore. This strategic win is of national importance, aimed at strengthening India's AI compute capabilities and advancing the country's ambitions for a Sovereign AI System under the IndiaAI Mission.

The order will leverage Netweb's latest GPU-accelerated platforms built on NVIDIA's cutting-edge Blackwell architecture. Execution is scheduled between the last quarter of FY26 and the first half of FY27.

Accelerating India's AI Leap

This deployment will mark a pivotal milestone in India's journey to build sovereign AI infrastructure. It will enable the development and deployment of indigenous large multimodal models, domain-specific foundational models, and scalable AI solutions for socio-economic transformation. The initiative also aims to support deep-tech AI startups to nurture innovation.

The offering will be designed and manufactured in India, leveraging Netweb's world-class, fully integrated in-house R&D and production capabilities, reaffirming the country's commitment to the Make-in-India vision and showcasing India's design and manufacturing strength.

Next-Generation AI Infrastructure

Netweb will deliver these systems through its flagship **Tyrone Camarero AI platform**, purpose-built for:

- Large scale Generative AI
- Foundational model training
- Exascale computing

Each node will feature Nvidia's latest generation **8x GPU-HGX-B200 accelerators**, optimised for high-throughput, memory-intensive workloads. These platforms will serve as critical infrastructure to bring India's compute capacity and capability in line with global benchmarks.

"This strategic order reflects the growing importance of sovereign compute capabilities in India's digital future. We are proud to contribute to the IndiaAI Mission by delivering best-in-class AI infrastructure, engineered and

manufactured in India. This will help India emerge as an AI superpower and benefit multiple industry verticals. Moreover, this will create a lasting impact on Indian citizens by enabling citizen-centric services, making it truly transformative.” said **Mr. Sanjay Lodha, Chairman and Managing Director, Netweb Technologies India Limited.**

He further added “This is a large-value strategic order, distinct from Netweb’s recurring business. As of 30 June 2025, the company’s pipeline stood at ₹41,421 million, excluding this order.

- The order is not part of Netweb’s formal financial guidance and should not be annualised or extrapolated into future forecasts.
- Execution will occur between Q4 FY26 and H1 FY27, with financial impact recognised during that period.

While this large strategic order is expected to boost the Company’s revenue and profits for the current and the coming financial year, Netweb remains focused on strong organic, medium to long-term growth, supported by a robust order pipeline, expanding product portfolio, and sustained investments in capability-building”.

About Netweb Technologies India Limited

Netweb Technologies India Limited is a leading Indian origin, owned, and controlled OEM specializing in High-end Computing Solutions (HCS). The company designs, manufactures, and deploys advanced computing infrastructure including AI systems, High-Performance Computing (HPC) clusters, private cloud and HCI platforms, high-performance storage, and data center servers. With deep-rooted indigenous R&D and complete in-house manufacturing, Netweb serves mission-critical workloads across sectors such as research, education, defense, healthcare, manufacturing, and financial services. Its capabilities make it a key partner in building sovereign AI and compute infrastructure under transformative national initiatives like IndiaAI and Make-in-India.
